 - Swept Blade Turbofan Props
 - Ram Air Recovery System
 - Enhanced Perf. Leading Edges
 - Dual Aft Body Strakes
 - **High Flotation Gear Doors**
 - Crown Wing Lockers

Does your B200 have high flotation gear?

If so, our fully-enclosed High Flotation Gear Doors will restore the climb and cruise performance lost with high flotation gear. That's why they are a key element of Raisbeck's EPIC Performance Package.

For military ISR operations, our High Flotation Gear Doors reduce drag and thereby increase loiter time by 30 minutes or more!

Benefits

- Restore the climb and cruise performance of B200s equipped with standard gear
- Cruise speeds are increased by 4-10 knots
- Wheel wells, tires, wheels and brakes are protected from the elements

Technology

- Fully encloses the protruding high-flotation gear, wheels, and tires
- Aerodynamically area-ruled to maximize drag reduction
- Constructed of lightweight composites for maximum strength and minimum weight
